***Allowable Subject Matter***

The following is a statement of reasons for the indication of allowable subject matter: The claims are drawn to pyranone compounds containing a 5-exo-halomethylene substitutions. A STN search for this structural core did not result in any hit. In addition, one of the instantly claimed compounds inhibited tumor growth with stated NIH standard (percent tumor growth/control <042%), and displayed maximum tolerated dose for single injection at 100 mg/kg in nude mice. The specification provides for chemical methods for making of the instantly compounds.
